Note: Classification depends on settings of safety parameters governing:
i) Re-ignition (no re-ignition attempt for 1A & 2A and single re-ignition for 2Ca)
ii) Main flame establishment period less than or equal to 5s (1A, 2A & 2Ca)
iii) Operation of flame ionisation rod (continuous for 1A), and operation of flame scanners (intermittent for 2A & 2Ca)

- option/parameter #115 be set to 5 seconds

2 - 1st Safety time is password protected

programmable - option/parameter #114

3 - 1st Safety Time of 10 seconds cannot be used for
an interrupted start flame, only an intermittent start
flame

4 - All controllers conform with classification

1A/1B/2A/2B depending on flame monitoring
equipment and '1st Safety Time'

- Class 1 requires the use of a self-check UV
scanner or IR scanner (mode dependent)

- Class A requires the '1st Safety Time' to be set to
3/5 seconds - option/parameter #114 set to 3/5
seconds

5 - If external flame switch is installed classification
will depend upon the classification of the external
flame switch.

. An external flame switch may only be installed
on Mk7 Evolution, Mk 6 Evolution MM and Mini

PREFACE

The Australian Gas Association (AGA) manages and operates accredited Product Certification Schemes, with funding largely provided by Certificate Holders through certification fees and badge sales. The AGA is an active participant in the standards writing process with representation on many *Standards Australia* committees that develop and publish the standards that underpin the Schemes.

In addition to product certification services for the electrical and plumbing industries, the AGA certifies gas product for the following categories or any combination of these categories:

- Natural Gas
- Town Gas
- Tempered Liquefied Petroleum Gas
- Liquefied Petroleum Gas

Approval for Liquefied Petroleum Gas appliances is divided into three sub-groups, designated as P (Propane), B (Butane) or U (Universal) gas.

Product Compliance:

Product that has been certified by AGA to comply with the requirements of the relevant Code/Standard, is subject to the Rules Governing the Scheme and, if required under the Scheme, is subject to routine and regular audits to confirm continued compliance.

Directory Structure:

AGA now certifies a variety of products, which are subject to one or more specific accredited type-tested schemes. This Directory lists current certificates grouped under the following headings:

- Type Tested Gas Products only
- Gas Cylinder Certification
- Disposable Gas Cartridges
- Test Stations Certification
- Type Tested Gas & Electrical Products (ie where the AGA Certificate covers an appliance assessed to both gas and electrical standards, eg a cooker with an electric oven and gas hotplates)
- Type Tested Electrical Products only (ie prescribed and non-prescribed articles)
- Type Tested Plumbing Products (WaterMark)

 the basic model with the above exceptions.
 2nd: 'A' = standard adjustable gas pressure
 regulator
 'C' = step-opening gas pressure regulator
 'H' = same as 'A' except the automatic
 valve assembly no. 393086 is employed
 for slow-opening characteristics.
 'J' = same as 'H' except time delay diode pack
 no. 20217A is employed.
 'K' = same as 'H' except the minimum
 operating temperature is -40°C
 instead of -17°C.
 'M' = same as 'A' except the minimum
 operating temperature is -40°C
 instead of -17°C.
 'N' = same as 'K' except 2-stage
 regulator employed.
 'P' = same as 'C' except the power unit no.
 394331-2 is employed and the
 minimum operating temper is -40°C.
 Note: The final four digits after the model number
 have no effect on the safety of the valve but
 determine finer characteristics and individual

PREFACE

The Australian Gas Association (AGA) manages and operates accredited Product Certification Schemes, with funding largely provided by Certificate Holders through certification fees and badge sales. The AGA is an active participant in the standards writing process with representation on many *Standards Australia* committees that develop and publish the standards that underpin the Schemes.

In addition to product certification services for the electrical and plumbing industries, the AGA certifies gas product for the following categories or any combination of these categories:

- Natural Gas
- Town Gas
- Tempered Liquefied Petroleum Gas
- Liquefied Petroleum Gas

Approval for Liquefied Petroleum Gas appliances is divided into three sub-groups, designated as P (Propane), B (Butane) or U (Universal) gas.

Product Compliance:

Product that has been certified by AGA to comply with the requirements of the relevant Code/Standard, is subject to the Rules Governing the Scheme and, if required under the Scheme, is subject to routine and regular audits to confirm continued compliance.

Directory Structure:

AGA now certifies a variety of products, which are subject to one or more specific accredited type-tested schemes. This Directory lists current certificates grouped under the following headings:

- Type Tested Gas Products only
- Gas Cylinder Certification
- Disposable Gas Cartridges
- Test Stations Certification
- Type Tested Gas & Electrical Products (ie where the AGA Certificate covers an appliance assessed to both gas and electrical standards, eg a cooker with an electric oven and gas hotplates)
- Type Tested Electrical Products only (ie prescribed and non-prescribed articles)
- Type Tested Plumbing Products (WaterMark)
